

HELLAN® FLUID STRAINERS

HELLAN STRAINERS APPROVED FOR POTABLE WATER SERVICE

Automatic strainers in sizes of 4" through 30" have been NSF-61 approved for potable water systems.

Hellan strainers can be installed upstream of membrane filters to remove large particles that could plug their micropores. Particles such as algae, snails, zebra or quagga mussels and other debris.

Since the Hellan strainer is designed to automatically clean when required, it reduces the maintenance of membrane filters and the strainer itself — which reduces cost!

Hellan 20" WDA Strainer

The Hellan automatic strainer employs electric motor-driven rotating screens and rigid scraper bars to remove solids from the surface of the screen when rotated. A solids collecting sump is also provided. Cleaning of the automatic strainer is initiated when the motor and the flush valve operator are actuated.

The Hellan automatic strainer
